this book constitutes the refereed proceedings of the 9th international conference on theory and applications of satisfiability testing sat 2006 held in seattle wa usa in august 2006 as part of the 4th federated logic conference floc 2006 the 26 revised full papers presented together with 11 revised short papers presented together with 2 invited talks were carefully selected from 95 submissions all current research issues in propositional and quantified boolean formula satisfiability testing are covered the papers are organized in topical sections on proofs and cores heuristics and algorithms applications smt structure max sat local search and survey propagation qbf as well as counting and concurrency

this book constitutes the refereed proceedings of the 14th international conference on theory and applications of satisfiability testing sat 2011 held in ann arbor mi usa in june 2011 the 25 revised full papers presented together with abstracts of 2 invited talks and

10 poster papers were carefully reviewed and selected from 57 submissions the papers are organized in topical sections on complexity analysis binary decision diagrams theoretical analysis extraction of minimal unsatisfiable subsets sat algorithms quantified boolean formulae model enumeration and local search and empirical evaluation

annotation this book constitutes the refereed proceedings of the 13th international conference on theory and applications of satisfiability testing sat 2010 held in edinburgh uk in july 2010 as part of the federated logic conference flocl 2010 the 21 revised full papers presented together with 14 revised short papers and 2 invited talks were carefully selected from 75 submissions the papers cover a broad range of topics such as proof systems and proof complexity search algorithms and heuristics analysis of algorithms combinatorial theory of satisfiability random instances vs structured instances problem encodings industrial applications applications to combinatorics solvers simplifiers and tools and exact and parameterized algorithms

this volume contains the papers presented at the 11th international conference on theory and applications of satisfiability testing sat 2008 the series of international conferences on theory and applications of satisfiability testing sat has evolved from a first workshop on sat in 1996 to an annual international conference which is a platform for researchers studying various aspects of the propositional satisfiability problem and its applications in the past the sat conference venue alternated between europe and north america for the first time the conference venue was in asia more precisely at the zhudao guest house near sun yat sen university in guangzhou pr china many hard combinatorial problems can be encoded into sat therefore improvements on heuristics on the practical side as well as theoretical insights into sat apply to a large range of real world problems more specifically many important practical verification problems can be rephrased as sat problems this applies to verification problems in hardware and software thus sat is becoming one of the most important core technologies to verify secure and dependable systems the topics of the conference span practical and theoretical research on sat and its applications and include but are not limited to proof systems proof complexity search algorithms heuristics analysis of algorithms hard instances randomized formulae problem encodings industrial applications solvers simplifiers tools case studies and empirical results sat is interpreted in a rather broad sense besides propositional satisfiability it includes for example the main of quantified boolean formulae qbf and satisfiability modulo theories smt
